

# Galvanised Expanded Varroa Mesh

**KEEP YOUR HIVE HEALTHY**

Here at Ridgeway  
we have a solution

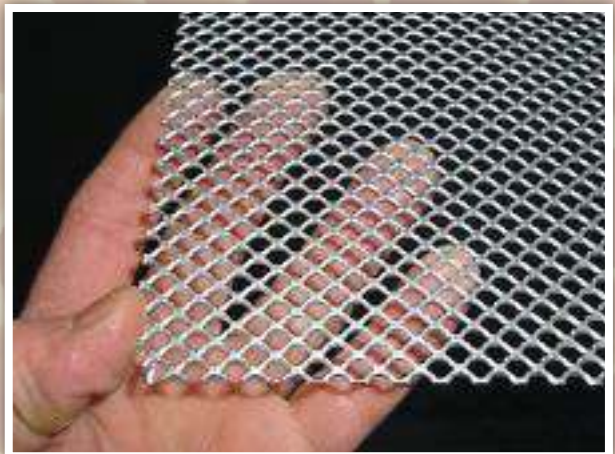

Beekeepers, Construct your own open mesh floor (OMF) to combat Varroa, improve wintering, due to lack of water vapour, and increased ventilation.

Replace the need for travelling screens, help get an accurate mite level in your hives.

These OMF floors with our mesh, work, by allowing any dislodged mites to fall from the hive where they are unable to re enter the hive.

Use our MESH also, as a travelling screen when moving your bees

Use our galvanised expanded mesh sheeting which is available in 8x4 sheets for collection, or delivery can be organised at courier cost.
